

WVF fit becomes one weight row

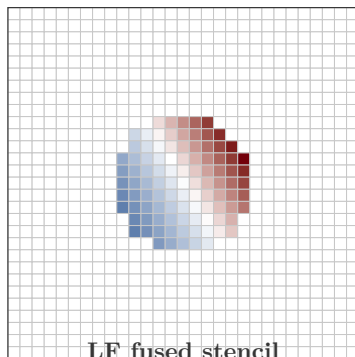

one dot product per pixel

$$A_{\theta} z \approx b$$

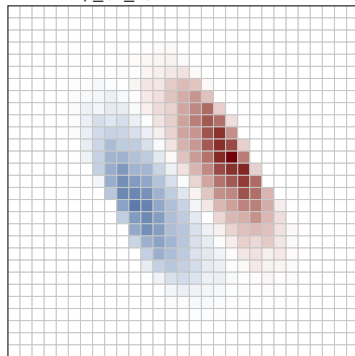

$$\hat{z} = P_{\theta} b$$

$$p_{f_x} = P_{\theta}[1, :]$$

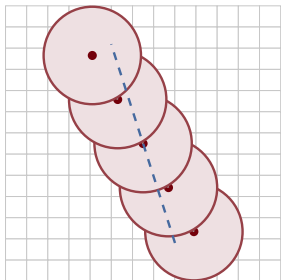

LF fused stencil

fixed $p_{-}(f_{-}x)$ for one orientation

single accumulated weight map

LF repeats the same WVF along the tangent

many shifted fits collapse into one fused stencil

$$R_{\theta} = \sum_{j=-m}^m w_j f_x^{(j)}$$

$$w_j = \exp\left(-\frac{j^2}{2\sigma_{\ell}^2}\right)$$

shift + sum + dedup
